

Reduce Product Loss and Increase Sanitation with Efficient Cleaning Systems

Whether you're conveying freshly-baked bread, ripe produce, or sliced bacon, yield and timeliness shouldn't have to take a backseat to sanitation and food safety. With the comprehensive line of cleaners from Flexco, they don't. Flexco Food Grade Primary and Secondary Cleaners not only ensure that valuable materials aren't being left on the belt or falling to the floor, but are easy to install and maintain so you can keep your lines running and deliver on the commitments you made to your customers.

Designed with food-grade materials and stainless steel components, the Food Grade Primary Cleaner, Food Grade Primary Cleaner with External Spring, and Food Grade Secondary Cleaner can tackle any challenge the food industry throws at them. They are easy to operate, adjust, and tension, minimizing blade wear, eliminating belt damage, and maximizing cleaning efficiency.

A Cleaner for Every Food Processing Application

Flexco cleaners feature a small footprint and come with a complete hardware set, including side plates and standoffs, so installation in any area of the conveyor is fast and easy. Cleaner blades are made with FDA-food grade UHMW and are available in white, blue, and metal detectable blue, and for uneven or soft-cover belts, blue metal detectable dual durometer. The simple, snap-in blade design allows for easy disassembly for quick maintenance, meaning your conveyor will be up and running in no time.

Choosing the Right Cleaner for Your Application

There's a Flexco Cleaner for every application – from the stickiest frostings, to the oiliest meats, to the most granular baking ingredients. Look for your application in the descriptions below to find the cleaners that are right for your conveyors.

Food Grade Primary Cleaner:

Mounted at the head pulley or in the secondary position, the FGP is corrosion resistant with limited crevices for bacteria growth. Ideal for industrial baking, confectionery, and fruit and vegetable processing.

Food Grade Primary Cleaner with External Spring: Mounted at the head pulley or in the secondary position, the FGP-ES features exposed components, including an external spring, making it easy to clean and maintain. Ideal for highly sanitary applications, like beef, pork and poultry, on homogenous or modular belting.

Food Grade Secondary Cleaner:

Mounted 1–4" (25–100 mm) from the transition point where the belt leaves the head pulley, or any location down the beltline, the blade can be in the leading or trailing position, with a variety of blade angles for better cleaning efficiency. Ideal for fruit and vegetable, oil and aluminum dust, and industrial baking applications.

Food Grade Primary Cleaner

- Less downtime for installation thanks to the C-dimension verification gauge that makes pole location and mounting quicker and easier.
- Available with metal detectable tip or dual durometer blue blade for use with soft cover and uneven belts.
- Blades are available in 12–60" (305–1524 mm) widths.

Simple to adjust spring tensioning unit ensures maximum cleaning benefits

Simple snap in place blade design allows for easy disassembly in less than a minute – no need to remove cleaner from structure for cleaning or replacement. Reassembly is just as quick so your line is up and running again fast.

Food Grade Primary Cleaner with External Spring

S304 solid stainless steel construction

External spring for easier tensioning and cleaning

- Exposed components make the system easy to clean, allow visual inspection, and simplify maintenance.
- Available in left or right-side installation for the service or operations side of the belt.
- Blades are available in 12–48" (305–1219 mm) widths.
- Evaluated for Third Party Conformance by BEAG for ANSI/ASB Z50.2-2015(R2020) Bakery Equipment Sanitation Requirements.

FOOD GRADE CLEANERS

Food Grade Secondary Cleaner

- Simple design with small footprint, featuring solid, stainless steel components and food-grade materials that can be installed in any area and easily cleaned.
- A secondary cleaner with built in flexibility to operate with the blade trailing or leading at a variety of blade-to-belt contact angles.
- Blades are available in 12–84" (305–2134 mm) widths.
- Evaluated for Third Party Conformance by BEAG for ANSI/ASB Z50.2-2015(R2020) Bakery Equipment Sanitation Requirements.
